MobiCall Healthcare

The triumph of professional alerting in Austria

In Austria, New Voice can look back on an unparalleled success story in the healthcare sector with its unified alarm communication solution MobiCall. An important milestone was the first major implementation of an alerting solution for a reference hospital in Carinthia in 2002. In the following 20 years, MobiCall

“
**market coverage
of
70-100%**
”

conquered the Austrian market and is now represented in all federal states without exception - with a market coverage of 70-100% depending on region and association. Today, more than 250 hospitals and nursing homes trust New Voice's fast, secure and reliable alerting.

Scalability

MobiCall is used in small nursing homes with 10 rooms as well as in large networked hospitals. As a prestige project, 30 hospital sites with more than 100 connected systems with real-time monitoring and information exchange were successfully implemented.

Flexibility

Existing hospital systems are integrated centrally by MobiCall and integrated independent of the manufacturer. Changing requirements allow the system to be expanded at any time without affecting existing systems.

Trust

For decades, large hospital associations in particular have relied on proven Swiss technology as the standard solution for all new and existing hospitals. Georedundancy and reliability are standard features of the MobiCall solution.

Product Range

MobiCall in healthcare provides solutions for patient call, life support systems, disoriented person location, fire alarm, access control, employee protection, panic alarm, medical equipment asset tracking, building management and refrigeration monitoring.

When speed is of the essence, simplicity is key. Healthcare professionals appreciate the simple administration and intuitive user interfaces. We appreciate working with our customers and partners, who always present us with new challenges and request exciting projects.
